Abstract of **JP 2004314563 (A)**

PROBLEM TO BE SOLVED: To provide a gas barrier film which is excellently transparent to enable a content to be seen through, enables usage of a metal detector, does not contain any substance causative for environmental destruction, has a high gas barrier property particularly under humidity at a high temperature to keep the content from oxygen and water vapor in the atmosphere and prevent degradation and deterioration of the content, and can be preferably used under humidity at a high temperature. ; **SOLUTION:** The gas barrier film laminate contains at least a gas barrier coated layer formed by applying a solution of a mixture of one or more metal alkoxides and/or their hydrolysates and a poly(meth)acrylic acid on one surface or both the surfaces of a plastic-made base material and drying it. ; **COPYRIGHT:** (C)2005,JPO&NCIP
